No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

The antibodies specifically bind to human cytotoxic T lymphocyte associated antigen-4 (CTLA-4). Such antibodies are used in methods for inducing, augmenting or prolonging an immune response to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal

This antibody specifically binds to human CC cytotoxic Tlymphocyte associated antigen-4 (CTLA-4). Such antibodies CC are used in methods for inducing, augmenting or prolonging an immune CC response to an antigen in a patient, where the antibodies block CC binding of human CTLA-4 to human B71 ligands. The antibodies are CC also useful for treating autoimmune disease in a subject caused or cc exacerbated by increased activity of T cells and for treating prostate CC cancer, melanoma or epithelial cancer. A polyvalent or polyclonal CC cancer, melanoma or epithelial cancer. A polyvalent or polyclonal CC cancer, melanoma or epithelial cancer. The prostate the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune captures for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia CC diabetes mellitus, transplant rejection, and inflammation, graft versus

region (CDR) amino acid sequences, and also includes variable region amino acid sequences are amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39761-B39771 represent anti-IL-12 CDR3 related amino acid sequences, AAB39761-B39771 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in AAC61062-C61071. The antibody of the invention is a neutralising antibody and has antirheumatic; antiarthritic; antisclerotic;
                                       antilnflammatory; neuroprotective; antipsoriatic; antiasthmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antipen-binding fragments are useful in the treatment of disorders associated with detrimental release of human II-12, especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition to treat human II-12 disorders.

The invention also lides antigen binding portions that bind to IL-12. Sequences ABB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's disease and multiple sclerosis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          interleukin-12 (IL-12). The invention also includes antigen binding copyrions that bind to IL-12: Sequences ARB39485-R39516 represent human canti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region and no acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39771-R40063 represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-R40063 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in CC AAC61062-C61071. The antibody of the invention is a neutralising antibody and has antirheumatic; antiarthritic; antisclerotic; cantinflammatory; neuroprotective; antipsoriatic; antiasthmatic; cantibodies of the invention are useful in the treatment of disorders associated with detrimental release of human IL-12, for the antibodies of antisclerotic antiasthmatic; cantiasthmatic; antiasthmatic; cantiasthmatic; antiasthmatic; antias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC This invention relates to a new human antibody specific for human CC interleukin-12 (II-12). The invention also includes antigen binding CC portions that bind to II-12. Sequences AAB39485-B39516 represent human CC anti-II-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 CC represent anti-II-12 CDR3 related amino acid sequences, AAB39772-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention is a neutralising CC antibody and has antirheumatic; antiarthritic; antisclerotic; CC antibody and has antirheumatic; antisperiatic; antisclerotic; CC antibodies or antigen-binding fragments are useful in the treatment CC of disorders associated with detrimental release of human II-12, antically contained arthritic and attributed arthritics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent diabetes mellitus, transplant rejection, and inflammation, graft versus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAB67490-99 and AAB67501-06 represents complementarity determining regions (CDRs) of human antibodies. The antibodies specifically bind thuman cytotoxic T lymphocyte associated antigen-4 (CTLA-4). Such antibodies are used in methods for inducing, augmenting or prolonging an immune response to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are

They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent diabetes mellitus, transplant rejection, and inflammation, graft versus

Such antibodies are used in methods for inducing, augmenting or prolonging an immune response to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are binding of treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer.                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents the heavy chain variable region of CC human antibody 10D1. This antibody specifically binds to human cylindry 10D1. This antibody specifically binds to human CC cytotoxic T lymphocyte associated antigen-4 (CTLA-4). Such antibodies are used in methods for inducing, augmenting or prolonging an immune cresponse to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are calso useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such similar and limitation and architits, myasthenia

                                                                                                                                                                                                                                                                   C anti-11-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region C amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771 represent anti-11-12 CDR3 related amino acid sequences, AAB39561-B39771 crepresent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and C construction of the antibodies of the invention are given in AC61062-C61071. The antibody of the invention is a neutralising C antibody and has antirheumatic; antiapthritic; antiasthmatic; cantiantiantiantiantiantiantic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human II-12,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39771 represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention is a neutralising antibody and has antirheumatic; antiarthic; antisclerotic;
                                                                                                                                                                                                                                                                                                                                                                                                     antiinflammatory; neuroprotective; antipsoriatic; antiasthmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human IL-12, especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition to treat human IL-12 disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's disease and multiple sclerosis -

The invention also includes antigen binding comportions that bind to IL-12. Sequences AAB39485-B39516 represent human complementarity determining compositions that bind to IL-12. Sequences AAB39485-B39516 represent human complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity determining complementarity. Sequences are sequences are complementarity. In AB49064-B49063 related amino acid sequences, AAB39772-B40063 crepresent other CDR3 related amino acid sequences, AAB39772-B40063 crepresent other CDR3 related amino acid sequences, AAB39772-B40063 crepresent other CDR3 related amino acid sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in AAG51062-C61071. The antibodies of the invention are given in AAG51062-C61071. The antibody of the invention are activity. Continuous antiparasitic, antiarthritic, antiarthritic, antiarthritic, antiarthritic, antiarthrity. Continuous associated with detrimental release of human IL-12, continuous associated with detrimental release of human iL-12, continuous disease, multiple sclerosis and rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      region (CDR) maino acid sequences, and also includes variable region constructly determining the main acid sequences. Other variable region amino acid sequences are constructed in AAB39517-B39560 and AAB40068-B401149. Sequences AAB39561-B39771 CC represent anti-II-12 CDR3 related amino acid sequences AAB39561-B39771 CC represent other CDR sequences. Light chain CDR3 consensus sequences are construction of the antibodies of the invention are given in AAB40064-B40067. Primers used in the identification and cc construction of the antibodies of the invention are given in AAC40062-C61071. The antibody of the invention is a neutralising cantibody and has antirheumatic; antiarthritic; antisclerotic; antibody and has antirheumatic; antiarthritic; antisclerotic; cardiant; antiparasitic; antibacterial are useful in the treatment of disorders associated with detrimental release of human IL-12, the construction of disorders disease, multiple sclerosis and rheumatoid arthritis.

treat disorders characterized by disease and multiple sclerosis -New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's

Claim 16; Page 225; 377pp; English.

amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771 represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in AAC61062-C61071. The antibody of the invention is a neutralising antibody and has antirheumatic; antiarthritic, antisclerotic; antiinflammatory; neuroprotective; antipsoriatic; antiasthmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human IL-12, especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition interleukin-12 (II-12). The invention also includes antigen binding portions that bind to II-12. Sequence s ARB9485-B39516 represent human anti-II-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen bindi human IL-12 disorders.
